

The theme of the conference - **“Preparing to meet manufacturing challenges to achieve Eco - Efficiency for Make in India”** aims to meet the need of the present generation without compromising the ability of future generation to meet their own needs. On the whole, this conference shall be providing a great opportunity where the researchers, academicians and professionals from industry will meet to exchange their thoughts and experiences on related domains with each other. The concept of green eco - efficiency in design, manufacturing and disposal are given higher importance in order to tackle pollution, energy scarcity & global warming issues and sustain the growth in the longer term. The uniqueness of this conference is that it attempts to provide the platform for the research fraternity in the field of mechanical, automobile and marine engineering to interact and define critical crosscutting barriers that, if successfully addressed, could enable step change impacts beyond the current state of the art. The new ideas, procedures and techniques is expected in this conference would address the technological challenges which are very vital to envisage the scenario of **“Make in India”**
